

Bullying in the Digital Era:

The Ugly Face of Facebook, Instagram & Snapchat

Join us at this **HOT TOPIC** webinar

Recent estimates suggest over a third of American teens have experienced cyber bullying, which has been associated with elevated rates of social anxiety, depression, and suicide. Since most of the bullying occurs out of sight, it can be difficult to identify if a child is being bullied.

In this webinar, participants will learn to assess cyber bullying in youth as well as practical resources and skills to address cyber bullying with their clients and their parents effectively. You'll learn the latest research findings relating to cyber bullying, and how to differentiate cyber bullying from other types of online behavior as well as forms of in-person bullying.

COST: Professionals: \$35 (1.5 CE for psychologists, certificate of attendance provided for all other disciplines)
\$25 - Student
Parents, educators and non-professionals:
\$10 (no CE credit)
